

Obagi Blue Peel Information

The Obagi Blue peel (TCA) is skin treatment designed to significantly improve the appearance and health of your skin. Obagi Blue Peel is a chemical peeling treatment suitable for both men and women of all skin types and colours.

How does it work?

The Obagi Blue Peel removes thin surface layers of aged and damaged skin from the face and other parts of the body. The underlying skin layers are stimulated to form a revived and rejuvenated surface with improved skin clarity and texture producing a healthier and more youthful appearance.

What areas can be treated?

The Obagi Blue Peel is suitable for the treatment of fine lines, wrinkles, age spots, acne, oily skin and large pores. It can be used to treat the face or other parts of the body such as the neck, chest, hands, back, arms and legs.

How is the treatment performed?

The layer/s of the peel will be applied to the desired area and you may experience a moderate burning sensation that lasts two to three minutes for each layer applied.

How long will the treatment and recovery take?

The application of the Blue Peel will take about 20 minutes depending on the number of layers the doctor has determined are necessary for you to achieve your goal. Your skin will begin to peel within 2 to 3 days. This peeling will continue over the next several days. Recovery will take approximately seven to ten days.

Are there any side effects?

As with any medical procedure there can be side effects. There will be an initial redness in the area treated and the skin will feel tight for short period. Immediately after the procedure, a bluish tint remains on your skin, which will usually wash off in 12 to 24 hours
